Program suite Jetimodel Flight Monitor is designed for processing telemetry data from DUPLEX EX products line. This software package is divided into separate program Flight Monitor (FM) and to software module for data input. For reading telemetry data from JetiBox Profi(JBP) is a software module JetiBox Profi Reader.

The Flight Monitor is used to display recorded values from the individual sensors, their detailed analysis and backup. Data can be showen in many various graphical forms and, even with map background when is MGPS sensor used.

JETIBOX profi Reader Program moduleis designed for JETIBOX profi to computer. Users can read previous stored telemetry data or allows reading actual data in the JBP RealTime mode. Telemetry data after reading are available for processing in the Flight Monitor.

Instalation:

Program runs on PC with operation system Windows XP and higher.

Program do not reguire any instalation. Only copy folder Jetimodel_FM\ with files to demand space in PC.

Run system:

Find running file JBP_Read.exe in folder Jetimodel_FM\. After running it choose mode:

- reading actaul data from JBP (Start RealTime mode)

- reading records (Read SD Card Records)

- running FM program without connected JBP (Start Flight Monitor). This is possible running direct file: Jetimodel_FM\bin\ Flight_Monitor.exe
